AI Engineer | Agentic AI, RAG & LLM Evaluation

SUMMARY

M.S. Computer Science graduate (CU Boulder, 3.8 GPA) building production-grade agentic and **RAG** systems with **Claude**, **MCP**, **LangGraph**, and **FastAPI** on **GCP**, on a foundation of enterprise data and **SQL**. Focused on evaluation, guardrails, and reliability of LLM systems.

TECHNICAL SKILLS

AI / LLM: Claude Agent SDK, MCP (tool and context integration), LangGraph, LangChain, RAG, embeddings and semantic search (pgvector), prompt engineering (few-shot, GEPA), LLM-as-a-Judge (MQM); Claude, Gemini, OpenAI GPT, Vertex AI

Languages & Backend: Python, TypeScript/JavaScript, SQL; FastAPI, Node.js, REST APIs, async processing, Redis, Auth0

Cloud & DevOps: GCP (Cloud Run, Cloud SQL, Vertex AI), AWS (EC2, S3, RDS, Lambda, ECS), Docker, GitHub Actions, CI/CD

Data: PostgreSQL, BigQuery, Snowflake, SQL Server, Oracle; pandas, scikit-learn

Testing & Observability: Integration Testing, Structured Logging, Execution Guardrails, Health Checks, Debugging, Monitoring

WORK EXPERIENCE

Vosyn 06/2026 – Present

Prompt & Agentification Engineer Intern

- Design and orchestrate **LangGraph** agent workflows with **Claude** and **OpenAI GPT**, connecting tool calls to **Python**, **FastAPI**, **REST APIs**, **PostgreSQL**, and **Google Cloud Vertex AI** for end-to-end retrieval, processing, and task-execution pipelines.
- Developed an MQM-based **LLM-as-a-Judge** evaluation on the **GEPA MQM Judge** baseline, scoring agent outputs by error type, span, and severity with **Claude Sonnet** and **Gemini Flash**, replacing single-score assessments and **reducing errors by 15%**.
- Engineered reusable prompt workflows using **RAG**, **few-shot prompting**, and **GEPA**-based optimization, improving retrieval accuracy and reference grounding to reduce hallucinations.

Credible Data

09/2025 – 05/2026

AI Engineer

- Built **Credible Atlas**, a natural-language analytics platform over **40+ datasets**: an AI agent using **Claude**, **MCP**, and **semantic-search retrieval** with **PostgreSQL** and **BigQuery** turns plain-language questions into autonomous SQL, results, and charts.
- Integrated the **Claude Agent SDK** into the **Node.js** backend with **MCP** tools and context so the agent runs data queries under controlled, secure execution; enforced access with **Auth0** (authentication).
- Deployed LLM inference services with **Python**, **FastAPI**, **Docker**, **Cloud Run**, **Cloud SQL**, and **GitHub Actions CI/CD**, cutting deployment overhead **35%**.
- Implemented **LLM guardrails**, **structured logging**, **health checks**, and automated validation and integration tests.

Deloitte

09/2025 – 08/2025

Technical Intern (Data Validation & Reporting)

- Built **Python** and **SQL** frameworks on **Snowflake** to automate validation, reconciliation, and reporting, **cutting efforts 25%**.
- Built fault-tolerant **reconciliation** and **schema-validation pipelines** with edge-case checks and exception handling.
- Root-caused data defects with QA; supported **UAT** and defect tracking (**Azure DevOps**, **Jira**) and **Power BI** dashboards.

BusinessNext

09/2022 – 05/2024

Data Analyst (Enterprise Data & CRM Analytics)

- Analyzed **enterprise CRM** datasets across **10+ business domains** using **SQL Server**, **Oracle** and **MDM** to support data migration and operational reporting.
- Developed **automated data transformation and reporting pipelines** using **SQL**, **stored procedures**, and **relational databases**, improving reporting efficiency and application performance by **40%**.
- Established **data validation**, **monitoring**, and **quality assurance workflows** using **SQL** and **production log analysis**, enhancing data reliability across enterprise reporting systems.

PROJECT

AI Operations Analyst | [GitHub](#)

- Building an agentic AI platform designed around **RAG**, **agent orchestration**, **MCP-style tools**, and **PostgreSQL/pgvector**, with a working **FastAPI** backend and health-check API in place now.
- Architecting the **guardrails**, **evaluation**, and **Docker/CI-CD** layers to bring the system to a production-ready state.

EDUCATION

M.S., Computer Science University of Colorado Boulder • GPA: 3.8/4.0

08/2024 – 05/2026

B.E., Information Technology University of Mumbai • GPA: 3.7/4.0

08/2018 – 05/2022
